and by course and distance to a found section corner. If we unsurveyed land, it should be so stated.)  Within the SE 1/2 NE 1/2 of Section 29, T.1N., R.56E., M.D.B. & M. (unsurveyed), or at a point from which the northwest corner of Section 19, T.1N., R.56E., M.D.B. & M., bears N. 54° 43′ 48″ W. a distance of 12,533 feet.
(See Basin 170 Map Sheet 1 of 3)
Place of use: (Describe by legal subdivision. If on unsurveyed land, it should be so stated.)
See Attachment A and Basin 170 Map Sheet 3 of 3.
Use will begin about January 1 and end about December 31 of each year.  Mosth and Day Mosth and Day
Description of proposed works. (Under the provisions of NRS 535.010 you may be required to submit plans and specifications of your diversion or storage works.) (State manner in which water is to be diverted, i.e. diversion structure, disches and flumes, drilled well with pump and motor, etc.)  Drilled and cased well, vertical turbine pump and motor, pipeline, and a temporary holding pond of about 100 x 100 feet deep or smaller.
Estimated cost of works: \$350,000
Estimated time required to construct works: 3 years
(If well completed, describe works.)  Estimated time required to complete the application of water to beneficial use: 10 years
Provide a detailed description of the proposed project and its water usage (use attachments if necessary):  (Failure to provide a detailed description may cause a delay in processing.)
See Attachment A (PeV-1).

## **ATTACHMENT A**

## Water Appropriation Permit Application Supplemental Information

## YMP Well Identifier PeV-1;

This application to temporarily appropriate the waters of the State of Nevada is being filed by the United States of America, U.S. Department of Energy (DOE) in order to provide water for meeting the DOE's responsibilities under the <u>Nuclear Waste Policy Act of 1982, as amended.</u> This application is being filed to appropriate water for the construction of a rail line to Yucca Mountain, which will probably take up to 10 years, but may take longer depending on funding and other issues. Once construction is completed the permit will be withdrawn.

<u>Item 2</u>. The total annual duty from 4 points of diversion applied for in Basin 170 will not exceed 123 acrefeet per year. It is anticipated that the total use of water within Basin 170 during the construction period will not exceed 145 acre-feet. An annual duty that is near the maximum anticipated need is requested because it is likely that a large proportion of the total water demand will be used during the first one to two years of construction.

<u>Item 3.</u> Construction uses will include, but are not limited to, geotechnical and hydrological investigations, road construction, facility construction, rail construction, dust suppression, quarry operations, construction camp operations, and other related site uses.

Item 6. The place of use is any portion of Sections that are within one-half mile of the rail alignment, access roads, and facilities within the basin of origin and adjacent basins, as shown in Basin 170 Map Sheet 3 of 3. The place of use is defined as all quarter-quarter sections within the following sections:

<u>T.3N., R.57E.</u>, Sections: 35, 36; <u>T.3N., R.58E.</u>, Sections: 13, 14, 15, 20, 21, 22, 23, 24, 27, 28, 29, 30, 31, 32; <u>T.3N., R.59E.</u>, Sections: 18, 19; <u>T.2N., R.56E.</u>, Sections: 36; <u>T.2N., R.57E.</u>, Sections: 1, 2, 3, 10, 11, 15, 16, 20, 21, 22, 28, 29, 30, 31, 32; <u>T.1N., R.51E.</u>, Sections: 27, 33, 34, 35; <u>T.1N., R.55E.</u>, Sections: 13, 21, 22, 23, 24, 26, 27, 28, 29, 30, 31, 32, 33; <u>T.1N., R.56E.</u>, Sections: 1, 2, 9, 10, 11, 12, 14, 15, 16, 17, 18, 19, 20, 21, 22, 29, 32; <u>T.1N., R.57E.</u>, Section: 6; <u>T.1S., R.51E.</u>, Sections: 2, 3, 10, 11, 12, 13, 14, 24, 25, 36; <u>T.1S., R.51½E.</u>, Sections: 18, 19, 29, 30, 31, 32; <u>T.1S., R.53E.</u>, Sections: 25, 35, 36; <u>T.1S., R.55E.</u>, Sections: 6, 7, 19, 30; <u>T.1S., R.56E.</u>, Sections: 5, 8, 16, 17, 21, 28, 33, 34; <u>T.2S., R.51E.</u>, Section: 1; <u>T.2S., R.51½E.</u>, Sections: 4, 5, 6, 7, 8, 9, 16, 17, 18; <u>T.2S., R.52E.</u>, Sections: 7, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24; <u>T.2S., R.53E.</u>, Sections: 1, 2, 3, 7, 8, 9, 10, 11, 15, 16, 17, 18; <u>T.2S., R.56E.</u>, Sections: 3, 4, 9, 10, 15, 16, 21, 28, 29, 32; <u>T.4S., R.56E.</u>, Sections: 5.

Item 12. The DOE will construct a 333-mile-long railroad from the existing Union Pacific mainline in Callente, Nevada to Yucca Mountain. That railroad will be used to transport spent nuclear fuel, high-level radioactive waste, and other materials to a geologic repository at Yucca Mountain. The DOE will also allow commercial shippers to use the rail line to ship general freight, subject to obtaining a Certificate of Public Convenience and Necessity from the Surface Transportation Board and other necessary regulatory approvals.

Up to 103 wells will be used along the rail line to obtain the approximately 6,000 acre-feet of groundwater required for construction of the railroad. DOE anticipates that about 90 percent of the water will be needed at some time during the first one to two years of construction for compaction of the rail roadbed and for dust suppression. The remainder of the water will be used throughout the construction phase for the activities described in Item 3 above. It is likely that all wells within a basin will be operated during the six- to twelve-month period when the roadbed is being constructed within a basin. Fewer wells may be operated within a basin, and likely will be pumped at a lower rate, during the remainder of construction.
